# The Leipzig Glossing Rules: Conventions for interlinear morpheme-by-morpheme glosses 

#### Abstract

About the rules The Leipzig Glossing Rules have been developed jointly by the Department of Linguistics of the Max Planck Institute for Evolutionary Anthropology (Bernard Comrie, Martin Haspelmath) and by the Department of Linguistics of the University of Leipzig (Balthasar Bickel). They consist of ten rules for the "syntax" and "semantics" of interlinear glosses, and an appendix with a proposed "lexicon" of abbreviated category labels. The rules cover a large part of linguists' needs in glossing texts, but most authors will feel the need to add (or modify) certain conventions (especially category labels). Still, it will be useful to have a standard set of conventions that linguists can refer to, and the Leipzig Rules are proposed as such to the community of linguists. The Rules are intended to reflect common usage, and only very few (mostly optional) innovations are proposed.

We intend to update the Leipzig Glossing Rules occasionally, so feedback is highly welcome.

## The rules

(slightly revised version of September 2004)

## Preamble

Interlinear morpheme-by-morpheme glosses give information about the meanings and grammatical properties of individual words and parts of words. Linguists by and large conform to certain notational conventions in glossing, and the main purpose of this document is to make the most widely used conventions explicit.

Depending on the author's purposes and the readers' assumed background knowledge, different degrees of detail will be chosen. The current rules therefore allow some flexibility in various respects, and sometimes alternative options are mentioned.

A remark on the treatment of glosses in data cited from other sources: Glosses are part of the analysis, not part of the data. When citing an example from a published source, the gloss may be changed by the author if they prefer different terminology, a different style or a different analysis.

## Rule 1: Word-by-word alignment

Interlinear glosses are left-aligned vertically, word by word, with the example. E.g.
(1) Indonesian (Sneddon 1996: 237)

Mereka di Jakarta sekarang.
they in Jakarta now
'They are in Jakarta now.'

## Rule 2: Morpheme-by-morpheme correspondence

Segmentable morphemes are separated by hyphens, both in the example and in the gloss. There must be exactly the same number of hyphens in the example and in the gloss. E.g.
(2) Lezgian (Haspelmath 1993: 207)

Gila abur-u-n ferma hamišaluğ güğïna amиq'-da-c now they-OBL-GEN farm forever behind stay-FUT-NEG 'Now their farm will not stay behind forever.'

Since hyphens and vertical alignment make the text look unusual, authors may want to add another line at the beginning, containing the unmodified text, or resort to the option described in Rule 4 (and especially 4C).

Clitic boundaries are marked by an equals sign, both in the object language and in the gloss.
(3) West Greenlandic (Fortescue 1984:127)
palasi=lu niuirtur=lu
priest=and shopkeeper=and
'both the priest and the shopkeeper'
If morphologically bound elements constitute distinct prosodic or phonological words, a hyphen and a single space may be used together in the object language (but not in the gloss).

## Rule 3: Grammatical category labels

Grammatical morphemes are generally rendered by abbreviated grammatical category labels, printed in upper case letters (usually small capitals). A list of standard abbreviations (which are widely known among linguists) is given at the end of this document.

Deviations from these standard abbreviations may of course be necessary in particular cases, e.g. if a category is highly frequent in a language, so that a shorter abbreviation is more convenient, e.g. CPL (instead of COMPL) for "completive", PF (instead of PRF) for "perfect", etc. If a category is very rare, it may be simplest not to abbreviate its label at all.

In many cases, either a category label or a word from the metalanguage is acceptable. Thus, both of the two glosses of (4) may be chosen, depending on the purpose of the gloss.
(4) Russian

My s Marko poexa-l-i avtobus-om v Peredelkino.
1PL COM Marko go-PST-PL bus-INSTR all Peredelkino
we with Marko go-PST-PL bus-by to Peredelkino
'Marko and I went to Perdelkino by bus.'

## Rule 4: One-to-many correspondences

When a single object-language element is rendered by several metalanguage elements (words or abbreviations), these are separated by periods. E.g.
(5) Turkish
çık-mak
come.out-INF
'to come out'
(6) Latin
insul-arum
island-GEN.PL
'of the islands'
(7) German
unser-n Väter-n
our-DAT.PL father.PL-DAT.PL
'to our fathers'
(8) Hittite (Lehmann 1983:211)
$n=a n$ apedani mehuni essandu.
CONN=him that.DAT.SG time.DAT.SG eat.they.shall
'They shall celebrate him on that date.'
(9) Jaminjung (Schultze-Berndt 2000:92)
nanggayan guny-bi-yarluga?
who 2DU.A.3sG.P-FUT-poke
'Who do you two want to spear?'
There are various reasons for a one-to-many correspondence between objectlanguage elements and gloss elements. These are conflated by the uniform use of the period. If one wants to distinguish between them, one may follow Rules 4A-E.

## Rule 4A. (Optional)

If an object-language element is neither formally nor semantically segmentable and only the metalanguage happens to lack a single-word equivalent, the underscore may be used instead of the period.

## (10) Turkish

çık-mak
come_out-INF
'to come out'

## Rule 4B. (Optional)

If an object-language element is formally unsegmentable but has two clearly distinguishable meanings or grammatical properties, the semi-colon may be used. E.g.

## (11) Latin

insul-arum
island-GEN;PL
'of the islands'

## Rule 4C. (Optional)

If an object-language element is formally and semantically segmentable, but the author does not want to show the formal segmentation (because it is irrelevant and / or to keep the text intact), the colon may be used. E.g.
(12) Hittite (Lehmann 1983:211)
(cf. 8)
n=an apedani mehuni essandu.
CONN=him that:DAT.SG time:DAT.SG eat:they:shall
'They shall celebrate him on that date.'

## Rule 4D. (Optional)

If a grammatical property in the object-language is signaled by a morphophonological change of the stem (ablaut, mutation, etc.), the backslash is used to separate the category label and the stem gloss.
(13) German
(cf. 7)
unser-n Väter-n
our-DAT.pL father $\backslash$ PL-DAT.PL
'to our fathers'
(14) Irish
bhris-is
PST $\backslash$ break-2SG
'you broke'

## Rule 4E. (Optional)

If a language has person-number affixes that express the agent-like and the patient-like argument of a transitive verb simultaneously, the symbol " $>$ " may be used in the gloss to indicate that the first is the agent-like argument and the second is the patient-like argument.
(15) Jaminjung
nanggayan guny-bi-yarluga?
who 2DU>3SG-FUT-poke
'Who do you two want to spear?'

## Rule 5: Person and number labels

Person and number are not separated by a period when they cooccur in this order. E.g.
(16)Italian
and-iamo
go-PRES.1PL (not: go-PRES.1.PL)
'we go'

## Rule 5A. (Optional)

Number and gender markers are very frequent in some languages, especially when combined with person. Several authors therefore use non-capitalized single-letter abbreviations without a period. If this option is adopted, then the second gloss is used in (17).
(17) Belhare
ne-e a-khim-chi n-yuıŋа
DEM-LOC 1sG.POSS-house-PL 3sG.N-be.NPST
DEM-LOC 1s.POSS-house-PL 3ns-be.NPST
'Here are my houses.'

## Rule 6: Non-overt elements

If the morpheme-by-morpheme gloss contains an element that does not correspond to an overt element in the example, it can be enclosed in square brackets. An obvious alternative is to include an overt " $Ø$ " in the objectlanguage text, which is separated by a hyphen like an overt element.
(18) Latin

$$
\begin{array}{lll}
\text { puer } & \text { or: } & \begin{array}{l}
\text { puer-Ø } \\
\text { boy[NOM.SG] }
\end{array} \\
\text { boy-NOM.SG }
\end{array}
$$

## Rule 7: Bipartite elements

Grammatical or lexical elements that consist of two parts which are treated as distinct morphological entities (e.g. bipartite stems such as Lakhota na-xPu 'hear') may be treated in two different ways:
(i) The gloss may simply be repeated:
(19) Lakhota
na-wićha-wa-x?u,
hear-3PL.UND-1SG.ACT-hear
'I hear them' (UND = undergoer, $\mathrm{ACT}=$ actor)
(ii) One of the two parts may be represented by a special label such as STEM:
(20) Lakhota
na-wićcha-wa-x?u
hear-3PL.UND-1SG.ACT- STEM
'I hear them'
Circumfixes are "bipartite affixes" and can be treated in the same way, e.g.
(21) German

| ge-seh-en <br> PTCP-see-PTCP | or: | ge-seh-en <br> PTCP-see-CIRC |
| :--- | :--- | :--- |
| 'seen' |  | 'seen' |

## Rule 8: Infixes

Infixes are separated by angle brackets, both in the object-language text and in the gloss.
(22) Tagalog
b<um>ili
$<$ ACTFOC>buy
'buy'
(23) Latin
reli<n>qu-ere
leave<PRS>-INF
'to leave'
Infixes are generally easily identifiable as left-peripheral (as in 22) or as rightperipheral (as in 23), and this determines the position of the gloss corresponding to the infix with respect to the gloss of the stem.

## Rule 9: Inherent categories

Inherent, non-overt categories such as gender may be indicated in the gloss, but a special boundary symbol, the round parenthesis, is used. E.g.
(24)Hunzib (van den Berg 1995:46)
ož-di-g xõxe $\quad m$-uq'e-r
boy-OBL-AD tree(G4) G4-bend-PRET
'Because of the boy the tree bent.' (G4 = 4th gender)

## Rule 10: Reduplication

Reduplication is treated similarly to affixation, but with a tilde (instead of an ordinary hyphen) connecting the copied element to the stem.
(25) Hebrew yerak~rak-im green~ATT-M.PL
'greenish ones'
(ATT $=$ attenuative)
(26) Tagalog bi~bili IPFV~buy 'is buying'
(27) Tagalog
$b<u m>i \sim b i l i$
<ACTFOC>IPFV~buy
'is buying'

## Appendix: List of Standard Abbreviations

| 1 | first person |
| :--- | :--- |
| 2 | second person |
| 3 | third person |
| A | agent-like argument of canonical transitive verb |
| ABL | ablative |
| ABS | absolutive |
| ACC | accusative |
| ADJ | adjective |
| ADV | adverb(ial) |
| AGR | agreement |
| ALL | allative |
| ANTIP | antipassive |
| APPL | applicative |
| ART | article |
| AUX | auxiliary |
| BEN | benefactive |
| CAUS | causative |
| CLF | classifier |
| COM | comitative |
| COMP | complementizer |
| COMPL | completive |
| COND | conditional |
| COP | copula |
| CVB | converb |
| DAT | dative |
| DECL | declarative |
| DEF | definite |
| DEM | demonstrative |
| DET | determiner |
| DIST | distal |
| DISTR | distributive |
| DU | dual |
| DUR | durative |
|  |  |

| ERG | ergative |
| :---: | :---: |
| EXCL | exclusive |
| F | feminine |
| FOC | focus |
| FUT | future |
| GEN | genitive |
| IMP | imperative |
| INCL | inclusive |
| IND | indicative |
| INDF | indefinite |
| INF | infinitive |
| INS | instrumental |
| INTR | intransitive |
| IPFV | imperfective |
| IRR | irrealis |
| LOC | locative |
| M | masculine |
| N | neuter |
| N - | non- (e.g. NSG nonsingular, NPST nonpast) |
| NEG | negation, negative |
| NMLZ | nominalizer/nominalization |
| NOM | nominative |
| OBJ | object |
| OBL | oblique |
| P | patient-like argument of canonical transitive verb |
| PASS | passive |
| PFV | perfective |
| PL | plural |
| POSS | possessive |
| PRED | predicative |
| PRF | perfect |
| PRS | present |
| PROG | progressive |
| PROH | prohibitive |
| PROX | proximal/ proximate |
| PST | past |
| PTCP | participle |
| PURP | purposive |
| Q | question particle/marker |
| QUOT | quotative |
| RECP | reciprocal |
| REFL | reflexive |
| REL | relative |
| RES | resultative |
| S | single argument of canonical intransitive verb |
| SBJ | subject |
| SBJV | subjunctive |
| SG | singular |
| TOP | topic |
| TR | transitive |
| VOC | vocative |
